Satalite radio should be allowed to compete and offer local weather and traffic info. It makes it easier when traveling you don't have to hunt on the radio for which station offers traffic and weather, when you know your satilite radio does. Also helps if i'm long distance traveling and can't quite get the local radio's but might make the decision to take a alternate route around chicago if the traffic and weather is really bad and i'm still over 100 miles away on my trip.
